Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary

Highlights

Manufacturers' prices fell for the second month in a row, down 0.4% in July compared with a 0.5% drop in June. On a 12-month basis, prices rose 5.0%, down from the 6.8% increase registered in June.

From a monthly perspective, lower prices for motor vehicles and other transport equipment (-1.8 %) contributed to more than half of the monthly decrease. This was mainly the result of the effect of the exchange rate. Lumber and other wood products fell by 2.0% as demand weakened for particleboard and softwood plywood.

Petroleum product prices continue their influence on the IPPI

12-month % change

Lower prices for pulp and paper products (-0.8%), petroleum and coal products (-0.6%), electrical and communication products (-0.9%), machinery and equipment (-0.6%) as well as fruit, vegetable and feed products (-0.3%) also contributed to the monthly decrease.

Prices for primary metal products rose 2.4% as a result of strong demand and lower inventories. Higher prices for nickel products (+15.2%), iron and steel products (+1.6%) and copper products (+4.7%) were responsible for most of this increase.

Price increases were also observed for metal fabricated products (+0.7%), chemical products (+0.3%) and meat, fish and dairy products (+0.4%).

Compared with July 2003, the Industrial Product Price Index (IPPI) rose 5.0%. The petroleum and coal products group continued to have a strong influence on the 12-month change with an increase of 24.1%. If petroleum and coal product prices had been excluded, the IPPI would have increased 3.8% on a 12-month basis.

Prices for primary metal products were up 23.6%, with iron and steel products (+24.5%) and nickel products (+60.8%) being the major contributors to this annual rise. Lumber and other wood products increased 15.3% from a year ago, with softwood lumber prices remaining high at 29.3%.

Higher prices for metal fabricated products (+10.3%), meat, fish and dairy products (+5.2%), pulp and paper products (+4.2%), chemical products (+2.8%) as well as fruit, vegetable and feed products (+3.1%) also contributed to the 12-month increase in the IPPI.

Raw material prices remain strong

On a monthly basis, raw materials prices were up 0.9% in July, following a drop of 1.2% in June. Mineral fuels were mostly responsible for the July gain, with an increase of 1.9%. Crude oil prices rose 3.5% as a result of supply uncertainties and increased demand.

Crude oil prices had less influence on the RMPI

12-month % change

Ferrous materials were up 10.9% as a result of higher prices for iron and steel scrap (+18.0%). Higher prices were also observed for non-ferrous metals (+2.9%) as prices for lead, copper and nickel concentrates continue to rise.

Vegetable products decreased by 5.4% as prices for soybeans (-13.9%), canola (-5.8%) and grains (-5.5%) fell as a result of stronger crop forecasts and weaker demand. Prices for animals and animal products were down 0.8% from June—mainly the result of lower prices for hogs for slaughter (-3.9%).

Manufacturers paid 17.7% more for their raw materials compared with one year ago, the strongest growth in 17 months. Mineral fuels were up 18.8% from a year ago with

crude oil prices rising 24.3%. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased 16.7%.

Animals and animal products increased by 16.5% from a year ago with cattle and calves for slaughter increasing by a record 74.5% and hogs for slaughter by 24.4%. Cattle and calves for slaughter prices, however, remained 32.6% lower compared with May 2003, when the only case of BSE or mad cow disease was discovered.

Prices for non-ferrous metals rose 33.5% from July 2003 to July 2004, mainly because of higher prices for lead, copper, zinc, nickel, gold and silver. Ferrous materials prices rose 40.4% compared with July 2003, with iron and steel scrap prices posting its strongest increase ever (+65.4%).

Higher prices for wood products (+7.1%), vegetable products (+5.2%) as well as non-metallic minerals (+3.2%) also contributed to the 12-month increase in the RMPI.

The IPPI (1997=100) stood at 110.6 in July, down from its revised level of 111.0 in June. The RMPI (1997=100) was 128.8 in July, up from its revised level of 127.6 in June.

Impact of exchange rate

Between June and July, the value of the U.S. dollar fell 2.6% against the Canadian dollar. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.4%, compared with the 0.4% actual decline.

On a 12-month basis, the change in the IPPI excluding the effect of the exchange rate was 6.5% from July 2003 to July 2004, compared with the 5.0% actual increase.

Prices for intermediate goods rise on a 12-month basis

Prices for intermediate goods remained unchanged from June. Higher prices for primary metal products, metal fabricated products, chemical products, petroleum products as well as rubber, leather and plastic products were offset by lower prices for lumber products, motor vehicles, pulp and paper products, fruit, vegetable and feed products and electrical and communication products.

Producers of intermediate goods received 8.3% more for their goods in July 2004 than in July 2003. Higher prices for primary metal products; petroleum products; lumber products; pulp and paper products; metal fabricated products; meat, fish and dairy products; fruit, vegetable and feed products; and chemical products were mainly responsible for the annual increase.

These increases were partly offset by declining prices for motor vehicles; electrical and communication products; and tobacco products.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

Finished goods prices down in July but up slightly from a year ago

On a monthly basis, prices for finished goods were down 1.0% from June. Lower prices for motor vehicles; petroleum products;

electrical and communication products; machinery and equipment; and lumber products were responsible for this monthly decline.

Higher prices for petroleum products; meat, fish and dairy products; fruit, vegetable and feed products; beverages; furniture and fixtures; tobacco products; chemical products; and lumber products pushed the 12-month prices up 0.5% from July 2003.

These increases were partly offset by declining prices for motor vehicles; electrical and communication products; pulp and paper products; and non-metallic mineral products.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder is bought by consumers.

Note to readers

Effective with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the Industrial Product Price Index and Raw Material Price Index are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point in time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.3% less than it would have been had the monthly average exchange rate been used to calculate the July 2003 index.

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor.
The numeric descriptor is of the order ss-mm-nn-pppp-rr where
ss indicates the S-level commodity code (from 9 to 28)
mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
rr indicates a split of a PCGA.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

Highlights

Manufacturers' prices edged up 0.1% in August compared with a 0.3% drop in July. Prices rose 4.9% on a 12-month basis, down from the 5.2% increase registered in July.

From a monthly perspective, petroleum and coal products prices increased 3.6% as higher prices were observed for gasoline and fuel oils (+3.2%). Lumber and other wood products increased by 3.4% as demand continued to be strong for softwood lumber, particleboard and softwood plywood.

Petroleum product prices continue their influence on the IPPI

12-month % change

Metal fabricated products (+0.6%) and tobacco products (+0.4%) also registered price increases in August.

Prices for motor vehicles and other transport equipment decreased 0.6%, mainly as a result of the effect of the exchange rate.

Primary metal products prices fell 0.9% as a result of weaker demand and higher inventories. Lower prices for nickel products (-9.2%) and aluminum products (-0.8%) were responsible for most of this decrease.

Price decreases were also observed for fruit, vegetable and feed products (-1.3%), meat, fish and dairy products (-0.8%), pulp and paper products (-0.3%), electrical and communication products (-0.3%) as well as chemical products (-0.2%).

Compared with August 2003, the Industrial Product Price Index (IPPI) rose 4.9%. The petroleum and coal products group (+21.1%) continued to have a strong influence on the 12-month change. If the petroleum and coal product prices had been excluded, the IPPI would have increased 3.8% on a 12-month basis.

Prices for primary metal products were up 22.4%, with iron and steel products (+25.1%), nickel products (+41.2%) and copper products (+47.9%) being the major contributors to this annual rise. Lumber and other wood products were 16.2% higher from a year ago with softwood lumber prices (+28.7%) continuing to climb.

Higher prices for metal fabricated products (+11.3%), meat, fish and dairy products (+6.4%), chemical products (+3.8%), pulp and paper products (+3.4%) as well as fruit, vegetable and feed products (+2.4%) also contributed to the 12-month increase in the IPPI.

Raw material prices remain strong

On a monthly basis, raw materials prices were up 3.3% in August, following a 1.2% advance in July. Mineral fuels were mostly responsible for the increase in August as prices rose 8.6%. Supply concerns pushed crude oil prices up 10.6%.

Vegetable products decreased by 4.9% as prices for wheat (-11.8%), soybeans (-8.6%), barley (-7.8%) and canola (-3.2%) declined because of stronger crop production, more competition and lower demand. Prices for animals and animal products were down 1.8% from July mainly the result of lower prices for cattle for slaughter (-6.0%), hogs for slaughter (-1.9%) as well as fish (-1.9%).

Crude oil prices continue to influence the RMPI

12-month % change

Ferrous materials were down 0.7% as a result of lower prices for iron and steel scrap (-0.6%). Lower prices were also observed for non-ferrous metals (-0.7%) as prices for lead, copper, nickel and zinc concentrates declined.

Manufacturers paid 20.9% more for their raw materials compared with one year ago. Mineral fuels were up 27.6% from a year ago with crude oil prices rising 33.7%. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased 14.8%.

Prices for non-ferrous metals rose 31.9% from August 2003 to August 2004, mainly because of higher prices for lead, copper, zinc, and nickel. Ferrous materials prices rose 43.3% compared with August 2003 with iron and steel scrap prices rising 69.8%.

Animals and animal products increased by 14.4% from a year ago with cattle and calves for slaughter increasing by 60.0% and hogs for slaughter up by 28.5%.

Higher prices for wood products (+5.9%) as well as non-metallic minerals (+3.6%) also contributed to the 12-month increase in the RMPI.

The IPPI (1997=100) stood at 110.9 in August, up slightly from its revised level of 110.8 in July. The RMPI (1997=100) was 133.2 in August, up from its revised level of 129.0 in July.

Impact of exchange rate

The value of the US dollar fell 0.8% against the Canadian dollar between July and August. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.3%, compared with the 0.1% actual increase.

On a 12-month basis, the IPPI excluding the effect of the exchange rate was 6.5% higher in August compared with the 4.9% actual increase.

Prices for intermediate goods rise on a 12-month basis

Prices for intermediate goods increased 0.3% from July. Higher prices for petroleum products, lumber products, metal fabricated products as well as chemical products were partly offset by lower prices for primary metal products, fruit, vegetable and feed products, meat fish and dairy products, motor vehicles, pulp and paper products, and electrical and communication products.

Producers of intermediate goods received 8.3% more for their goods in August 2004 than in August 2003. Higher prices for primary metal products; petroleum products; lumber products; metal fabricated products; pulp and paper products; chemical products; meat, fish and dairy products; and fruit, vegetable and feed products were mainly responsible for the annual increase.

These increases were partly offset by lower prices for motor vehicles, tobacco products and textile products.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

Finished goods prices down in August but up slightly from a year ago

On a monthly basis, prices for finished goods were down 0.2% from July. Lower prices for motor vehicles; meat, fish and dairy products; electrical and communication products; and machinery and equipment were responsible for this monthly decline.

These decreases were partly offset by higher prices for petroleum products, lumber products, chemical products and pulp and paper products.

Compared with August 2003, prices for finished goods edged up 0.1%. Higher prices for petroleum products, meat, fish and dairy products, fruit, vegetable and feed products, beverages, chemical products, furniture and fixtures, tobacco products, and lumber products were offset by lower prices for motor vehicles, electrical and communication products, pulp and paper products as well as machinery and equipment.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the products from the food and feed category end up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder is bought by consumers.

Note to readers

Effective with the January 2004 release, the monthly average exchange rate as determined by the Bank of Canada is used to convert prices received in currencies other than the Canadian dollar. Previously, the exchange rate conversion of such prices was carried out using the rate for the 15th of the month. The decision to switch to the monthly rate reflects the fact that the Industrial Product Price Index and Raw Material Price Index are intended to measure the change in the average monthly price for these goods. The monthly average exchange rate is a better estimator of the actual exchange rates used in transactions than a point in time exchange rate. The estimated impact of this change is small at the total level. The 12-month change is 0.2% more than it would have been had the monthly average exchange rate been used to calculate the August 2003 index.

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor.

The numeric descriptor is of the order ss-mm-nn-pppp-rr where

ss indicates the S-level commodity code (from 9 to 28)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

nn indicates the N-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details

pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)

rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

Explanation of Methods Used and Additional Sources for Industrial Price Indexes	61

Highlights

Prices that manufacturers received for their goods at the plant gate rose again in September compared with the same month last year, but at a weaker pace than in the previous four months.

At the same time, the price of raw materials used by factories accelerated for the seventh month in a row.

Manufacturers received 4.6% more for their goods than they did in September last year, the third consecutive month of weaker growth. The rate of growth in the Industrial Product Price Index (IPPI) has been decelerating since it reached a peak of 7.0% in June.

Petroleum product prices still influence the IPPI

Prices for petroleum and coal products continued to have a major influence on the 12-month change, rising 28.3% from September 2003. If petroleum and coal product prices had been excluded, the IPPI would have increased only 3.0%, rather than 4.6%.

Meanwhile, raw materials cost factories substantially more, as manufacturers paid 25.0% more for their inputs than they did in September last year. This was the largest 12-month gain since June 2000 when raw materials prices surged 27.2%.

Mineral fuels (+43.0%) and crude oil prices (+56.8%) posted their biggest gains since February 2003. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased only 11.1% instead of 25.0%.

In September, the IPPI (1997=100) stood at 110.7, down from its revised level of 111.4 in August. The RMPI (1997=100) reached 134.2, up from a revised level of 133.8 in August.

IPPI: Primary metals also major factor in increase

Prices for primary metal products also had an affect on the IPPI in September, rising 21.8% from a year ago. Steel products, nickel products and copper products were the major contributors.

Metal fabricated products increased 11.9%, mainly as a result of the higher cost for steel. Lumber and other wood products and chemical products also contributed to the 12-month increase in the IPPI.

Manufacturers' prices fell 0.6% between August and September on the heels of a 0.4% increase the month before.

Prices for motor vehicles and other transport equipment declined 1.3%, mainly because of a stronger Canadian dollar. Prices for meat, fish and dairy products fell 3.6% as a result of lower prices for beef and veal products.

Pulp and paper products, primary metal products and lumber and other wood products also registered price decreases in September. These decreases were partially offset by higher prices for petroleum and coal products.

Price of raw materials remains strong

The price of raw materials other than mineral fuels remained strong in September. On a 12-month basis, prices manufacturers paid for non-ferrous metals rose 30.2%, mainly because of higher prices for copper, lead, zinc and nickel.

Ferrous materials prices rose 39.0% from September last year, with iron and steel scrap prices rising 61.6%. Other major contributors were higher prices for animals and animal products, wood products as well as non-metallic minerals.

Raw materials prices rose 0.3% between August and September, a slowdown from a 3.7% gain the month before.

Mineral fuels were up, as crude oil prices rose 1.5% due to continuing supply uncertainties as well as the effect of Hurricane Ivan on inventories.

Offsetting the increase in mineral fuels, prices for ferrous materials were down 5.5% from August as a result of lower prices for iron and steel scrap. In addition, non-ferrous metals decreased 1.4% as prices for zinc, nickel, silver and lead declined.

Price decreases were also observed for vegetable products as prices for soybeans and canola fell from August.

Crude oil prices continue to influence the RMPI

12-month % change

Prices for intermediate goods decreased 0.4% from August. Lower prices for meat, fish and dairy products; pulp and paper products; primary metal products; lumber products; motor vehicles; fruit, vegetable and feed products; and electrical and communication products were partially offset by higher prices for petroleum products as well as chemical products.

Finished goods prices down

On a monthly basis, prices for finished goods were down 0.8% from August. Lower prices for motor vehicles; meat, fish and dairy products; electrical and communication products; and machinery and equipment were responsible for this monthly decline. These decreases were partly offset by higher prices for petroleum products.

Compared with September 2003, prices for finished goods were down 0.2%, the first decrease in four months. Lower prices for motor vehicles, electrical and communication products as well as textile products were partly offset by higher prices for petroleum products, meat, fish and dairy products, fruit, vegetable and feed products, and furniture and fixtures.

Impact of the exchange rate

Between August and September, the value of the Canadian dollar strengthened against the US dollar, rising 1.8%.

As a result, if the impact of the exchange rate had been excluded, the IPPI would have slipped just 0.1%, compared with the actual 0.6% decline.

On a 12-month basis, if the impact of the exchange rate had been excluded, producer prices would have risen 6.2% between September 2003 and September 2004, rather than their actual 4.6% increase.

Prices for intermediate goods continue to rise on a 12-month basis

Producers of intermediate goods received 8.0% more for their goods in September 2004 than in September 2003. Higher prices for petroleum products; primary metal products; metal fabricated products; lumber products; chemical products; and pulp and paper products were mainly responsible for the annual increase.

These increases were partly offset by declining prices for motor vehicles; tobacco products; fruit, vegetable and feed products; and textile products.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its U.S. counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor.

The numeric descriptor is of the order ss-mm-nn-pppp-rr where

ss indicates the S-level commodity code (from 9 to 28)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details

pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)

rr indicates a split of a PCGA.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

Reference Documents

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

Highlights

Prices for manufactured goods at the plant gate eased again in October, while the price of raw materials used by factories continued to grow.

On a monthly basis, the prices charged by manufacturers fell by 0.5% for the second month in a row. Four of the last five months have seen monthly declines in the Industrial Product Price Index (IPPI).

The 12-month change in the IPPI was 5.4%, up from September's increase of 4.7% but unchanged from July and August and down from a high of 7.0% in June.

Prices for petroleum and coal products continued to have a major influence on the 12-month change, rising 38.6% from October 2003. If petroleum and coal product prices had been excluded, the IPPI would have increased only 3.0% rather than 5.4%.

Meanwhile, raw materials cost factories substantially more, as manufacturers paid 28.0% more for their inputs than they did in October last year. This surpasses the 12-month rise of 24.6% of September and is the highest increase since March 2000.

On a 12-month basis, both mineral fuels (+52.5%) and crude oil prices (+68.0%) posted their largest gains since June 2000. If mineral fuels had been excluded, the Raw Materials Price Index (RMPI) would have increased only 8.8% instead of 28.0%.

The monthly increase in the RMPI was 3.8%, up from no change in September and the largest advance in the last six months.

In October, the IPPI (1997=100) stood at 110.2, down from its revised level of 110.8 in September. The RMPI (1997=100) reached 138.9, up from a revised level of 133.8 in September.

IPPI: Monthly decrease mainly due to lumber, motor vehicles, and pulp and paper products

On a month-over-month basis, manufacturers' prices fell 0.5% in October following a similar decrease of 0.5% in September.

Lumber and other wood products were down 7.6% as demand decreased due to declining construction activity and higher supply levels.

Prices for motor vehicles and other transport equipment declined 1.6%, mainly because of a stronger Canadian dollar versus the US dollar. Prices for pulp and paper products fell 1.7% due to higher inventory levels for pulp.

Electrical and communication products as well as fruit, vegetable and feed products also registered price declines in October. These decreases were partially offset by higher prices for petroleum and coal products and chemical products.

IPPI: Primary metals continue to be a major factor in the 12-month change

Prices for primary metal products also had an impact on the IPPI in October, rising 21.1% from a year ago. Primary steel, copper and nickel products were the major contributors.

Metal fabricated products increased 12.9%, mainly as a result of the higher cost for steel related material. Chemical products, pulp and paper products as well as lumber and other wood products also contributed to the 12-month increase in the IPPI.

These increases were partly offset by lower prices for motor vehicles and other transport equipment which were down 3.2% from a year ago.

RMPI: Prices of raw materials remain strong

On a 12-month basis, the price of raw materials other than mineral fuels remained strong in October compared with the same month last year but rose at a slower rate than in recent months.

Prices manufacturers paid for non-ferrous metals rose 24.2%, mainly because of higher prices for radio-active concentrates, lead, copper, nickel, tin and silver. Ferrous materials prices rose 39.5% from October last year, with iron and steel scrap prices rising 62.2%.

Prices for manufactured goods easing

Raw materials prices continue to accelerate

Other major contributors to the 12-month increase were higher prices for animals and animal products, wood products as well as non-metallic minerals.

On a monthly basis, raw materials prices rose 3.8% in October, an increase from the no change registered in September and the largest advance in the last six months.

Mineral fuels were up compared with September, as crude oil prices rose 10.2% due to supply concerns, low inventories and limited production.

Prices for non-ferrous metals increased 0.6% as prices for radioactive concentrates, silver, copper and nickel rose. In addition, ferrous materials were up 0.3% from September as a result of higher prices for iron and steel scrap.

Offsetting these monthly increases were vegetable products, which declined 4.2% as prices were down for corn, wheat and canola. Higher crop production and lower demand were the main reasons for the decrease. Animals and animal products declined as prices for hogs for slaughter dropped 3.5%. Decreases were also observed for wood products.

Impact of the exchange rate

Between September and October, the value of the Canadian dollar strengthened against the US dollar with an increase of 3.2%.

As a result, if the impact of the exchange rate had been excluded, the IPPI would have risen 0.4% compared with the actual 0.5% decline.

On a 12-month basis, if the impact of the exchange rate had been excluded, producer prices would have risen 7.0% between October 2003 and October 2004, rather than their actual 5.4% increase.

Prices for intermediate goods continue to rise on a 12-month basis

Producers of intermediate goods received 8.3% more for their goods in October 2004 than in October 2003. Higher prices for petroleum products; primary metal products; metal fabricated products; chemical products; pulp and paper products; and lumber products were mainly responsible for the annual increase.

These increases were partly offset by declining prices for motor vehicles; fruit, vegetable and feed products; and tobacco products.

Prices for intermediate goods decreased 0.6% from September. Lower prices for lumber products; pulp and paper products; motor vehicles; fruit, vegetable and feed products; and electrical and communication products were partially offset by higher prices for petroleum products as well as chemical products.

Finished goods prices are up from a year ago

Compared with October 2003, prices for finished goods were up by 1.0%. Higher prices for petroleum products; fruit, vegetable and feed products; meat, fish and dairy products; machinery and equipment; chemical products; beverages; and furniture and fixtures were the major contributors to this increase. Lower prices for motor vehicles and lumber products partly offset the annual rise.

On a monthly basis, prices for finished goods were down 0.4% from September. Lower prices for motor vehicles; electrical and communication products; lumber products; machinery and equipment; and metal fabricated products were responsible for this monthly decline. These decreases were partly offset by higher prices for petroleum products as well as pulp and paper products.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

Note: Indexes for the most recent six months shown are subject to revision.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor.

The numeric descriptor is of the order ss-mm-nn-pppp-rr where

ss indicates the S-level commodity code (from 9 to 28)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details

pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)

rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

Highlights

Prices for manufactured goods at the plant gate continued to decline in November, posting their largest monthly drop since May 2003. Raw materials prices also receded compared with October, as prices were down for crude oil.

Prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), fell for the third month in a row on a monthly basis. Lower prices for motor vehicles, petroleum, lumber, and pulp and paper products were the main sources of the monthly decline.

The 12-month change in the IPPI was 4.1%, down from October's increase of 5.5%.

Prices for manufactured goods declining

The Raw Materials Price Index (RMPI) fell 5.3% from October to November, a noticeable about-face compared with the 4.1% increase registered the month before. There were price declines in mineral fuels, wood products, vegetable products, animals and animal products, and ferrous materials.

Raw materials cost factories 19.7% more compared with November 2003. This was down from the 12-month rise of 28.4% in October.

The IPPI (1997=100) stood at 108.5 in November, down from its revised level of 110.4 in October. The RMPI (1997=100) reached 131.9, down from a revised level of 139.3 in October.

IPPI: Monthly decrease due to motor vehicles, petroleum, lumber, and pulp and paper products

On a month-over-month basis, manufacturers' prices fell 1.7% following a 0.4% drop in October.

Prices for motor vehicles and other transport equipment declined 2.8%, mainly because of a stronger Canadian dollar. Petroleum and coal products prices decreased as gasoline and fuel oil prices dropped 4.7%.

Lumber and other wood products were down 4.3% due to high levels of supply. Prices for pulp and paper products fell 2.5%, mainly due to higher inventory levels for pulp.

Electrical and communication products, meat, fish and dairy products, primary metal products, fruit, vegetable and feed products, chemical products as well as machinery and equipment also contributed to the decrease in November.

IPPI: Petroleum and primary metals continue to be major factors in the 12-month change

On a 12-month basis, the IPPI was up 4.1% in November. Prices for petroleum and coal products continued to have a major influence on the 12-month change, rising 36.9% from November 2003. If petroleum and coal product prices had been excluded, the IPPI would have increased only 1.8%, rather than 4.1%.

Prices for primary metal products also had a big impact on the increase, rising 21.2% from November 2003. Primary steel, copper and nickel products were the major contributors.

Metal fabricated products increased 13.4%, mainly as a result of higher raw material costs. Chemical products, rubber, leather and plastic fabricated products, pulp and paper products, non-metallic mineral products as well as furniture and fixtures also contributed to the 12-month increase in the IPPI.

These increases were partly offset by lower prices for motor vehicles and other transport equipment, which were down 4.8% from November 2003. Price decreases were also observed for fruit, vegetable and feed products; meat, fish and dairy products; lumber products; and electrical and communication products.

RMPI: Prices weaken in November

On a monthly basis, raw materials prices fell 5.3% in November. Mineral fuels were down compared with October, as crude oil prices declined 10.8% due to higher inventories and increased production.

Raw materials prices recede in November

Prices for wood products decreased 4.1% due to lower prices for softwood logs and bolts. Vegetable products declined 1.6% as prices were down for corn, wheat and barley. Higher crop production and lower demand are the main reasons for the decrease. Animals and animal products declined as prices for hogs for slaughter dropped 4.7%. Decreases were also observed for ferrous materials.

On a 12-month basis, the price of raw materials were up 19.7% in November, but down from the 28.4% increase posted in October. Mineral fuels were up 36.6% with crude oil prices rising 46.8%. If mineral fuels had been excluded, the RMPI would have increased only 6.5% instead of 19.7%.

Prices manufacturers paid for non-ferrous metals rose 20.6%, mainly because of higher prices for radioactive concentrates, copper, lead, zinc and silver. Ferrous materials prices rose 36.6% from November 2003, with iron and steel scrap prices rising 57.8%.

Other major contributors to the 12-month increase were higher prices for animals and animal products as well as non-metallic minerals.

Impact of the exchange rate

Between October and November, the value of the Canadian dollar strengthened 4.2% against the US dollar.

As a result, if the impact of the exchange rate had been excluded, the IPPI would have fallen 0.6% compared with the actual 1.7% decline.

On a 12-month basis, if the impact of the exchange rate had been excluded, producer prices would have risen 6.5% between November 2003 and November 2004, rather than their actual 4.1% increase.

Prices for intermediate goods down

Prices for intermediate goods decreased 1.6% from October. Lower prices for lumber products; petroleum products; pulp and paper products; motor vehicles; primary metal products; chemical products; electrical and communication products; meat, fish and dairy products; and fruit, vegetable and feed products were the major contributors to the decrease.

Producers of intermediate goods received 7.1% more for their goods in November 2004 than in November 2003, down from the 8.7% increase in October. Higher prices for petroleum products; primary metal products; metal fabricated products; chemical products; pulp and paper products; and rubber, leather and plastic products were mainly responsible for the annual increase.

These increases were partly offset by declining prices for fruit, vegetable and feed products; motor vehicles; lumber products; meat, fish and dairy products; and electrical and communication products.

Finished goods prices decline

On a monthly basis, prices for finished goods were down 1.9% from October. Lower prices for motor vehicles; petroleum products; meat, fish and dairy products; electrical and communication products; machinery and equipment; and lumber products were responsible for this monthly decline.

Compared with November 2003, prices for finished goods were down by 0.3%. Lower prices for motor vehicles; meat, fish and dairy products; electrical and communication products; lumber products; and machinery and equipment were the major contributors to the annual decline.

Higher prices for petroleum products; fruit, vegetable and feed products; chemical products; furniture and fixtures; tobacco products; beverages; and rubber, leather and plastic products partly offset the annual decrease.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
- ss indicates the S-level commodity code (from 9 to 28)
 - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
 - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
 - rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum_i w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

A Guide to Understanding the Changing Roles of Women and Men in Canada.

The 20th century was a period of remarkable change in the status of women in Canadian society. While much has been accomplished in reducing the socio-economic gaps between men and women, many important differences still exist.

An essential resource

The latest edition of Statistics Canada's acclaimed publication *Women in Canada* documents and traces the changing roles, status and lifestyles of Canadian women today while painting a comprehensive gender-based portrait of the Canadian population at the dawn of a new century. As a quick reference, the millennial edition of *Women in Canada* uses relevant statistics and easy-to-read analysis to provide the input and facts you need to:

- ✿ plan social policies
- ✿ study women's issues
- ✿ develop marketing strategies

This document is the groundwork for any report or research. Bringing into focus a broad portrait of the female and male population, *Women in Canada* will help you put complex data into clear perspective. This 300-page report, including

over 100 tables and 50 charts, describes many key indicators such as:

- ✿ income
- ✿ health
- ✿ employment
- ✿ criminal victimization
- ✿ housing
- ✿ education
- ✿ family life
- ✿ unpaid work and volunteer activity

Women in Canada also includes separate sections which reflect the unique experiences of immigrant women, women in a visible minority, Aboriginal women, and senior women.

Or contact your nearest Statistics Canada Reference Centre listed in this publication. Via Internet e-mail: order@statcan.ca.

Indispensable

Women in Canada is crucial in appreciating the nature of gender dynamics in Canada today. This report is a must for anyone concerned with the changes that have taken place in the status of women in Canada. It will be of particular value to those involved in the study of gender issues or the development of social policy.

Explanation of Methods Used and Additional Sources for Industrial Price Indexes	61

Highlights

Monthly prices for manufactured goods at the factory gate rose in December for the first time since August. Meanwhile, raw materials prices declined for the second month in a row, as prices for crude oil continue to fall.

Prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), rose 0.3% after three consecutive months of declines. Higher prices for motor vehicles, lumber, and pulp and paper products were the main sources of the monthly increase.

Prices for manufactured goods increasing

The 12-month change in the IPPI was 3.8%, unchanged from November's increase.

The Raw Materials Price Index (RMPI) fell 4.3% in December from a month earlier, following a 5.2% decrease in November. There were price declines in mineral fuels, ferrous materials, wood products, and non-metallic minerals.

Compared with December 2003, raw materials cost factories 11.6% more. This was down from the 12-month rise in November (+19.8%) and October (+28.3%).

In December, the IPPI (1997=100) stood at 108.5, up from its revised level of 108.2 in November. The RMPI (1997=100) reached 126.3, down from a revised level of 132.0 in November.

IPPI: Monthly increase due to motor vehicles, lumber, and pulp and paper products

On a month-over-month basis, manufacturers' prices rose 0.3% following a 2.0% decrease in November.

Prices for motor vehicles and other transport equipment increased 1.2%, mainly because of a weaker Canadian dollar.

Lumber and other wood products were up 4.2% due to tight supply and increased demand. Prices for pulp and paper products rose 0.7% mainly due to a limited supply for pulp.

Meat, fish and dairy products, electrical and communication products, machinery and equipment, rubber, leather and plastic products as well as fruit, vegetable and feed products also contributed to the increase in December.

Petroleum and coal products prices fell as gasoline and fuel oil prices dropped 6.6% compared with November.

IPPI: Petroleum and primary metals continue to be major factors in the 12-month change

On a 12-month basis, the IPPI was up 3.8% in December. Prices for petroleum and coal products continued to have a major influence on the 12-month change, rising 25.6% from December 2003. If petroleum and coal product prices had been excluded, the IPPI would have increased only 2.3% rather than 3.8%.

Prices for primary metal products also had a big impact on the increase in the IPPI, rising 16.6% from December 2003. Primary steel, copper and nickel products were the major contributors to the advance.

Metal fabricated products increased 11.8%, as the cost for raw material remained high. Chemical products, lumber and other wood products, rubber, leather and plastic fabricated products, as well as pulp and paper products also contributed to the 12-month increase in the IPPI.

These increases were partly offset by lower prices for motor vehicles and other transport equipment, which were down 4.0% from December 2003. Price decreases were also observed for fruit, vegetable and feed products and meat, fish and dairy products.

RMPI: Prices continue to weaken in December

On a monthly basis, raw materials prices fell 4.3% in December. Mineral fuels were down compared with November, as crude oil prices declined 11.4% mainly due to higher inventories.

Ferrous materials decreased 5.5% from November as iron and steel scrap prices were down 8.3%. Prices for wood products decreased 0.5% due to lower prices for softwood logs and bolts. Decreases were also observed for non-metallic minerals.

Animals and animal products increased 2.1% as higher prices were observed for cattle for slaughter (+7.4%), hogs for slaughter (+2.3%) as well as poultry (+2.9%). Prices for non-ferrous metals were up 2.6% from November mainly due to higher prices for zinc and copper concentrates. Prices for vegetable products also rose 0.5% as prices were up for wheat, barley and coffee.

On a 12-month basis, the price of raw materials rose 11.6% in December, a smaller increase than in November (+19.8%). Mineral fuels were up 19.6% with crude oil prices rising 24.7%. If mineral fuels had been excluded, the RMPI would have increased only 5.3% instead of 11.6%.

Raw materials prices continue to decrease

Prices manufacturers paid for non-ferrous metals rose 17.1%, mainly because of higher prices for radio-active concentrates, copper, lead, and zinc. Ferrous materials prices rose 24.8% from December 2003, with iron and steel scrap prices rising 37.7%.

Other major contributors to the 12-month increase were higher prices for animals and animal products as well as non-metallic minerals.

These increases were partly offset by lower prices for vegetable products and wood products.

Impact of the exchange rate

Between November and December, the value of the Canadian dollar fell 1.9% against the US dollar.

As a result, if the impact of the exchange rate had been excluded, the IPPI would have fallen 0.3% compared with the actual 0.3% increase.

On a 12-month basis, if the impact of the exchange rate had been excluded, producer prices would have risen 5.9% between December 2003 and December 2004, rather than their actual 3.8% increase.

Prices for intermediate goods increase

Prices for intermediate goods increased 0.2% from November. Higher prices for lumber products; motor vehicles; pulp and paper products; meat, fish and dairy products; electrical and communication products; chemical products; and rubber, leather and plastic products were the major contributors to the increase.

Lower prices for petroleum and coal products, primary metal products and metal fabricated products partially offset the monthly increase.

Producers of intermediate goods received 6.7% more for their goods in December 2004 than in December 2003, down from the 8.8% increase registered in November. Higher prices for petroleum products; primary metal products; metal fabricated products; chemical products; lumber products; pulp and paper

products; and rubber, leather and plastic products were mainly responsible for the annual increase.

These increases were partly offset by declining prices for fruit, vegetable and feed products; motor vehicles; meat, fish and dairy products; and tobacco products.

Finished goods prices increase in December

On a monthly basis, prices for finished goods were up 0.3% from November. Higher prices for motor vehicles; meat, fish and dairy products; electrical and communication products; machinery and equipment; and lumber products were responsible for this monthly rise.

Compared with December 2003, prices for finished goods were down 0.3%. Lower prices for motor vehicles and meat, fish and dairy products were the major contributors to the annual decline.

Higher prices for petroleum products; fruit, vegetable and feed products; furniture and fixtures; rubber, leather and plastic products; tobacco products; beverages; and chemical products partly offset the annual decrease.

Looking back at 2004

For 2004, manufacturers received an average of 3.1% more for their products than in 2003, a notable turnaround from the 1.3% decline in 2003.

The main contributors to this increase were petroleum and coal products (+17.0%), primary metal products (+17.9%), metal fabricated products (+9.0%) and lumber and other wood products (+12.2%).

Motor vehicles and other transport equipment prices fell 4.6% on average in 2004. This decrease was mainly the result of a stronger Canadian dollar.

The value of the Canadian dollar rose 7.5% against the US dollar on average in 2004. If the impact of the exchange rate had been excluded, the annual IPPI would have risen 5.1% rather than the actual 3.1% increase.

Raw materials prices were up an average of 11.8% in 2004 compared with the 2.0% increase in 2003. Most of the upward pressure came from higher prices for mineral fuels with crude oil prices rising 21.8% on average in 2004. Other major contributors to the annual average increase were ferrous materials (+30.9%) and non-ferrous metals (+27.8%).

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor.

The numeric descriptor is of the order ss-mm-nn-pppp-rr where

ss indicates the S-level commodity code (from 9 to 28)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details

pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)

rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are "must take" respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

Human Activity
and the Environment
2000

Don't
waste a
moment!

Get the
environmental
information
you need...
and in a
cost-effective
way.

Get immediate insight into how Canadians influence the environment!

**How can we maintain the quality of our air,
water and soil?**

**Can we continue extracting non-renewable
resources at today's rates?**

Are we conserving and recycling enough?

Human Activity and the Environment 2000 answers these questions and more. It provides extensive data on population, economic activities, the environment and explains relationships among these key elements.

- ☼ **Discover** a world of information, from sustainable development to ozone depletion and biodiversity.
- ☼ **Find out** how governments, businesses and households respond as environmental conditions change.
- ☼ **Learn about** direct and indirect environmental quality issues.

**An all-inclusive blend of current figures,
historical facts and authoritative analysis in a
user-friendly presentation.**

Quickly spot trends and issues in the publication's 330 pages, packed with tables, charts, graphs and colour maps. Or simply consult the CD-ROM, which includes everything from the book plus more tables and features *EcoGraf*, a custom graphing and mapping application.

Whether you are a researcher, consultant, policy maker, student or concerned Canadian,
Human Activity and the Environment 2000 will help you:

- ☼ **augment** research when preparing reports, essays, analyses on environmental impacts;
- ☼ **compare** environmental performances both internationally and provincially;
- ☼ **keep abreast** of public support for protection policy measures;
- ... and undertake many other activities!
